SPIE leadership and guiding principles

SPIE is the international society for optics and photonics. We've operated as a not-for-profit since our founding in 1955, connecting, engaging, and serving our global constituency of more than 258,000 people from 184 countries. We are led by a dedicated team of volunteers — including a Board of Directors, multiple committees, conference chairs, and journal editors — with the mission of partnering with researchers, educators, and industry to advance light-based research and technologies for the betterment of the human condition.

Operations are directed from our headquarters in Bellingham, Washington, USA.

CONNECTING MINDS ADVANCING **LIGHT**

We are SPIE Student Chapter University of Delhi at Acharya Narendra Dev College. We collaborate with colleagues, perform outreach in the community, develop professional and leadership skills, form partnerships with industries, and reward student members with industry based experience and various grants.
